

UMESH CHANDRA P V

DevOps Engineer | Site Reliability Engineer (SRE) | AI Platform Engineer

Hyderabad, India | +91 9440039684 / 9381046418 | pathapatiumesh2024@gmail.com

Open to DevOps Engineer, Site Reliability Engineer (SRE), and AI Platform Engineer roles

PROFESSIONAL SUMMARY

DevOps / Site Reliability Engineer (SRE) and AI Platform Engineer with 6+ years of experience in infrastructure automation, Kubernetes orchestration, cloud-native reliability, and CI/CD. Proven expertise in Ansible, AWX, Docker, Helm, AWS (Lambda, S3), Microsoft Azure, Google Cloud, Grafana, Splunk, Python, FastAPI, and Linux. Delivered 60% reduction in manual workflows, 25% cloud cost reduction, 95% deployment success rate, and faster incident response through observability, SLOs, error-budget thinking, and infrastructure automation. Currently enabling high availability for 400+ data science engineers on Anaconda, Kubernetes, Helm, and PySpark platforms with strong focus on uptime, scalability, deployment frequency, and cost optimization.

CORE TECHNICAL SKILLS

DevOps & SRE: Kubernetes, Helm, Docker, Ansible, AWX, CI/CD, GitHub, Infrastructure as Code (IaC), configuration management, deployment automation, high availability, disaster recovery, SLOs, SLIs, error budgets, incident response, MTTR reduction, service reliability

Cloud & Platforms: Amazon Web Services (AWS), AWS Lambda, Amazon S3, Microsoft Azure, Google Cloud Platform (GCP), multi-cloud, serverless architecture, cloud cost optimization, resource management

Observability & Monitoring: Grafana, Grafana Enterprise, Splunk, dashboards, real-time alerting, log analysis, performance monitoring, ServiceNow, observability stacks

Programming & Automation: Python, FastAPI, REST APIs, scripting, Linux, Windows automation, MongoDB, Postman, PySpark, Anaconda, AI/ML platform operations, data science infrastructure

Leadership: cross-functional leadership, mentoring, project management, collaboration, platform reliability engineering, stakeholder communication

KEY ACHIEVEMENTS

- Security & Deployment Automation: Achieved 95% deployment success rate, accelerating delivery and operational efficiency across automated release workflows.
- Awarded Cost Savings / Customer Delight: Recognized for client support excellence and delivering approximately 30% project cost savings through automation and platform optimization.
- Cross-team Leadership Impact: Led cross-functional initiatives that improved project success rate by 25% and increased engineering productivity through mentoring and tooling.

PROFESSIONAL EXPERIENCE

Specialist - Architecture (Automation & Platforms)

03/2025 - Present

LTMindtree | Hyderabad, India | Banking & Financial Services (Americas)

- Boosted platform stability and high availability for 400+ global data science engineers by resolving complex Kubernetes and infrastructure reliability challenges.
- Led Anaconda v5 upgrade and Kubernetes Helm deployments, improving scalability, reliability, and deployment frequency for AI/ML and data science platform workloads.
- Enhanced service continuity by 20% by building 5 Grafana dashboards and implementing real-time alerts aligned to SLO-oriented observability practices.
- Reduced incident response time (MTTR) by integrating Splunk real-time alerts into the on-call workflow, strengthening production reliability and error-budget awareness.
- Improved workflow efficiency by 15% and enabled advanced PySpark pipelines by remediating critical AI platform engineering blockers for data science teams.
- Ensured high availability and improved user experience of the Anaconda platform through strategic Docker/Kubernetes deployments and continuous platform support.

Technical Lead (CIS Automation Tools & Platforms)

08/2022 - 02/2025

Cognizant | Bangalore, India

- Reduced operational costs by 20% and increased dashboard adoption by 15% by leading design and deployment of Grafana Enterprise observability across AWS, Azure, and Google Cloud for a major retail client.
- Cut incident response times by 30% and improved monitoring coverage by integrating Grafana Enterprise with existing tooling, alerts, and ServiceNow workflows.

- Achieved 30% faster troubleshooting and 25% lower cloud costs by developing cloud-agnostic dashboards and automating resource management across multi-cloud environments.
- Improved system performance by 20% and API response time by 40% through FastAPI development, while mentoring junior engineers and raising team productivity by 20%.

Software Developer (Automation & Platforms)

10/2019 - 06/2022

Microland Ltd | Bangalore, India

- Optimized Ansible playbooks and AWX automation to reduce manual operational effort by 60% and improve system stability by 50% across Linux and Windows fleets.
- Integrated Microbots Platform with ServiceNow using Python and REST APIs, boosting incident resolution efficiency by 40% and accelerating ticket routing.
- Developed Python automation for incident reassignment and MongoDB data entry, saving approximately 3 hours of manual work daily.
- Automated service restarts on Windows and Linux using Ansible, cutting related downtime by 30% and improving service reliability.
- Contributed to CI/CD-friendly automation patterns and infrastructure support that improved deployment consistency and reduced human error in production changes.

EDUCATION

Bachelor of Technology (B.Tech), Electrical and Electronics Engineering

07/2016 - 04/2019

Mohan Babu University | India

TARGET ROLE ALIGNMENT

Target roles: DevOps Engineer, Site Reliability Engineer (SRE), AI Engineer / AI Platform Engineer. Core stack alignment: Kubernetes, Helm, Docker, Ansible, AWS, Azure, GCP, Grafana, Splunk, Python, FastAPI, CI/CD, SLOs, error budgets, observability, cloud cost optimization, infrastructure automation, and AI/ML platform reliability.
